

Orange Practicals

Practical 1

Aim: Classification using orange.

Procedure:

- Drag and drop a File widget from the Data section found in the left panel to the workspace.

File

- Double click the File widget and choose the **zoo.tab** dataset.

Source

☒ File: zoo.tab ... Reload

☐ URL: ...

Info

Zoo dataset
This dataset consists of 101 animals with various traits to describe them.

101 instance(s)
16 feature(s) (no missing values)
Classification; categorical class with 7 values (no missing values)
1 meta attribute(s)

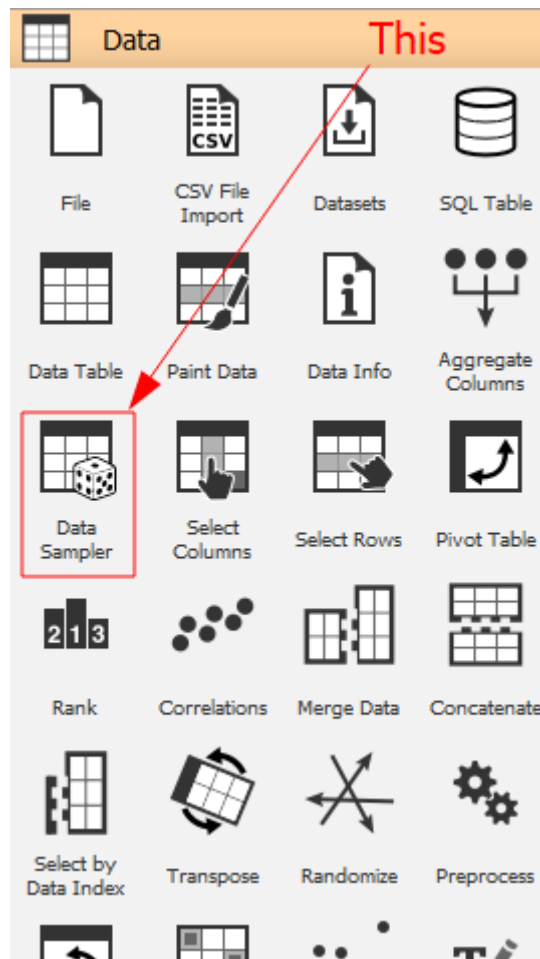

Columns (Double click to edit)

	Name	Type	Role	Values
1	hair	C categorical	feature	0, 1
2	feathers	C categorical	feature	0, 1
3	eggs	C categorical	feature	0, 1
4	milk	C categorical	feature	0, 1
5	airborne	C categorical	feature	0, 1
6	aquatic	C categorical	feature	0, 1

- Drag and drop a Data Sampler widget onto the workspace and connect it to the File widget. This widget is found in the Data section.

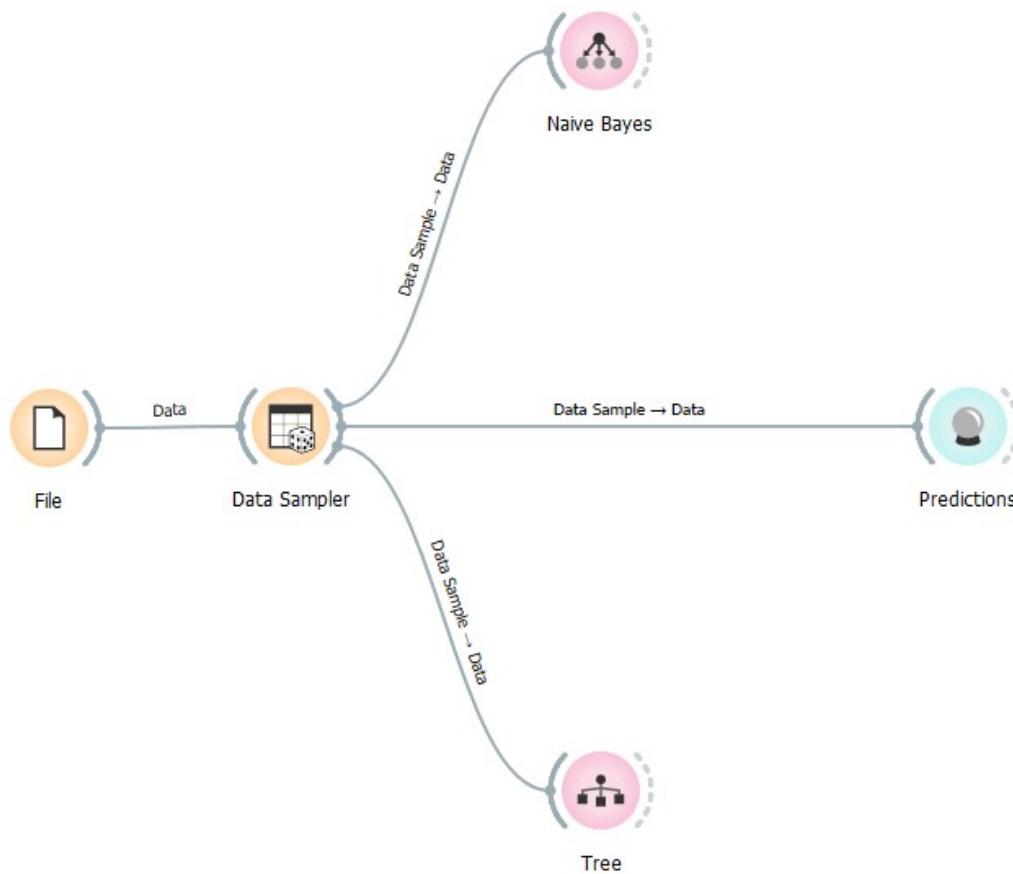

- We choose the Naïve Bayes' and Classification Tree models to classify our data. Drag and drop these widgets to the workspace. They are found under the Models section.

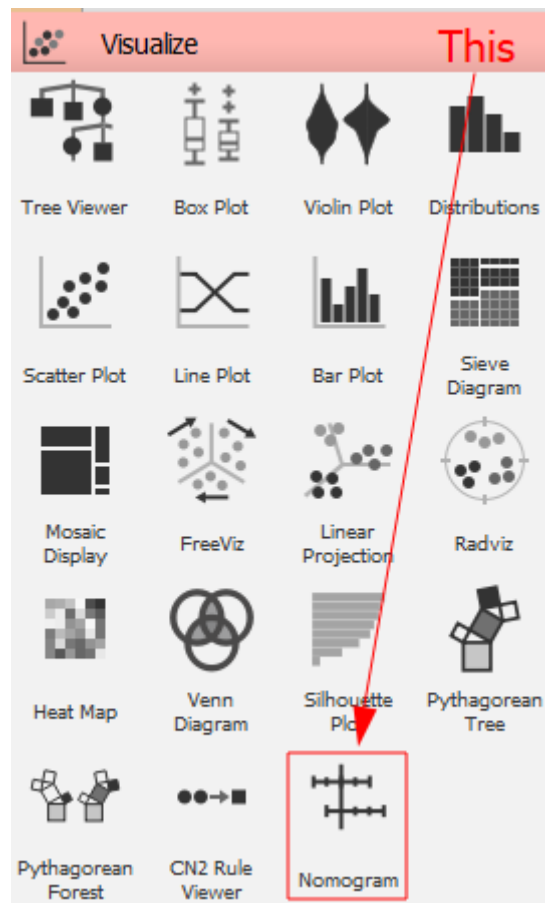

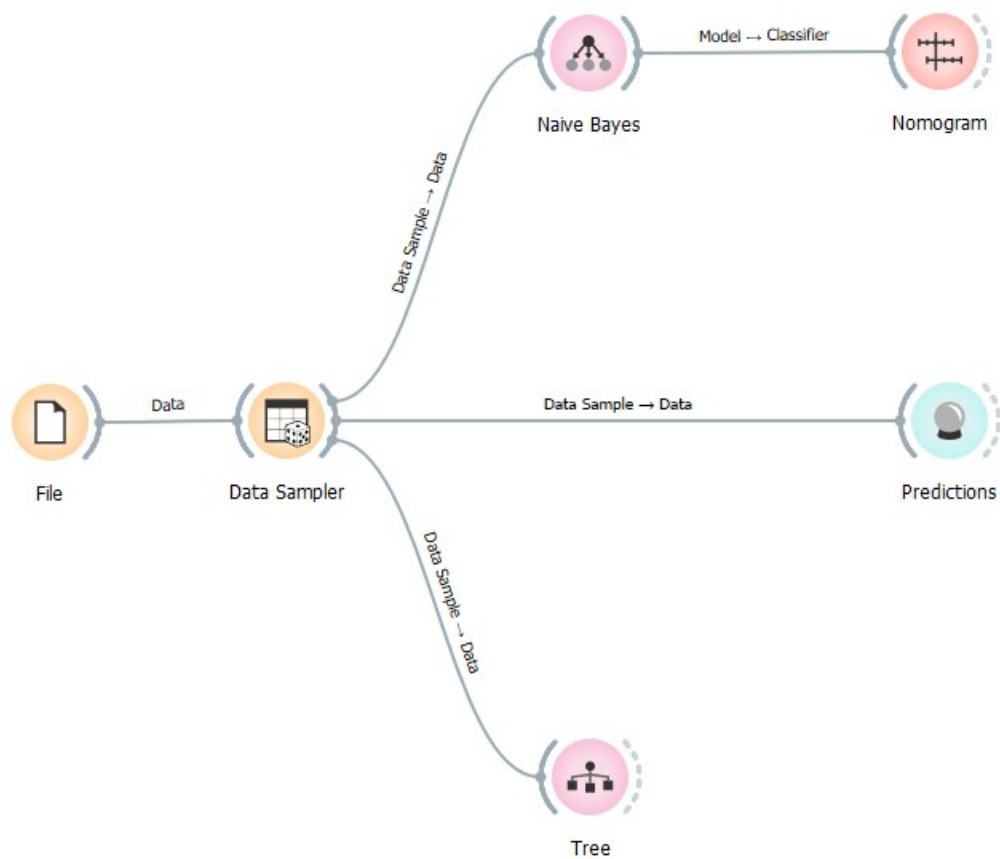

- To perform predictions on the data, we drag and drop the Predictions widget onto the workspace. This widget is found in the Evaluate section.

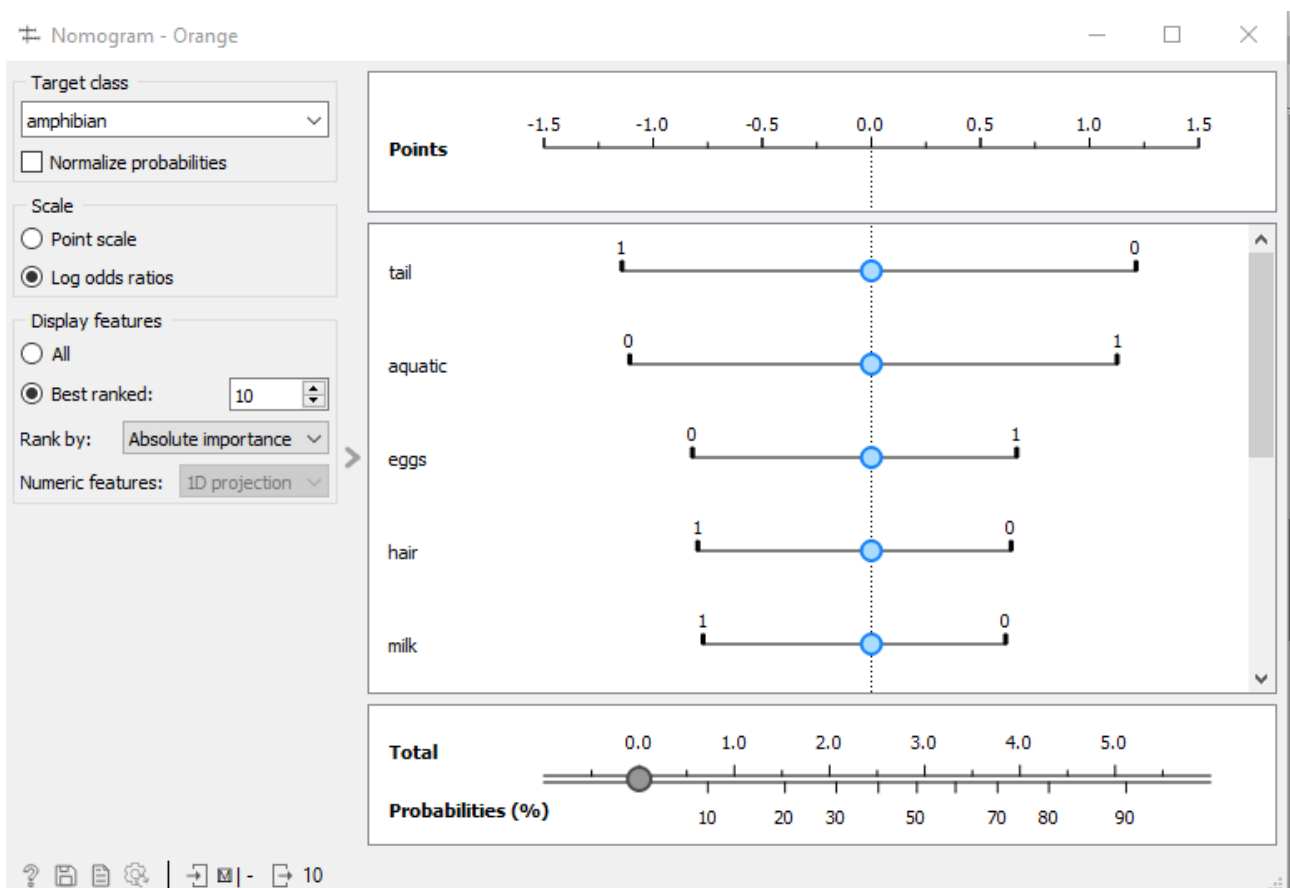

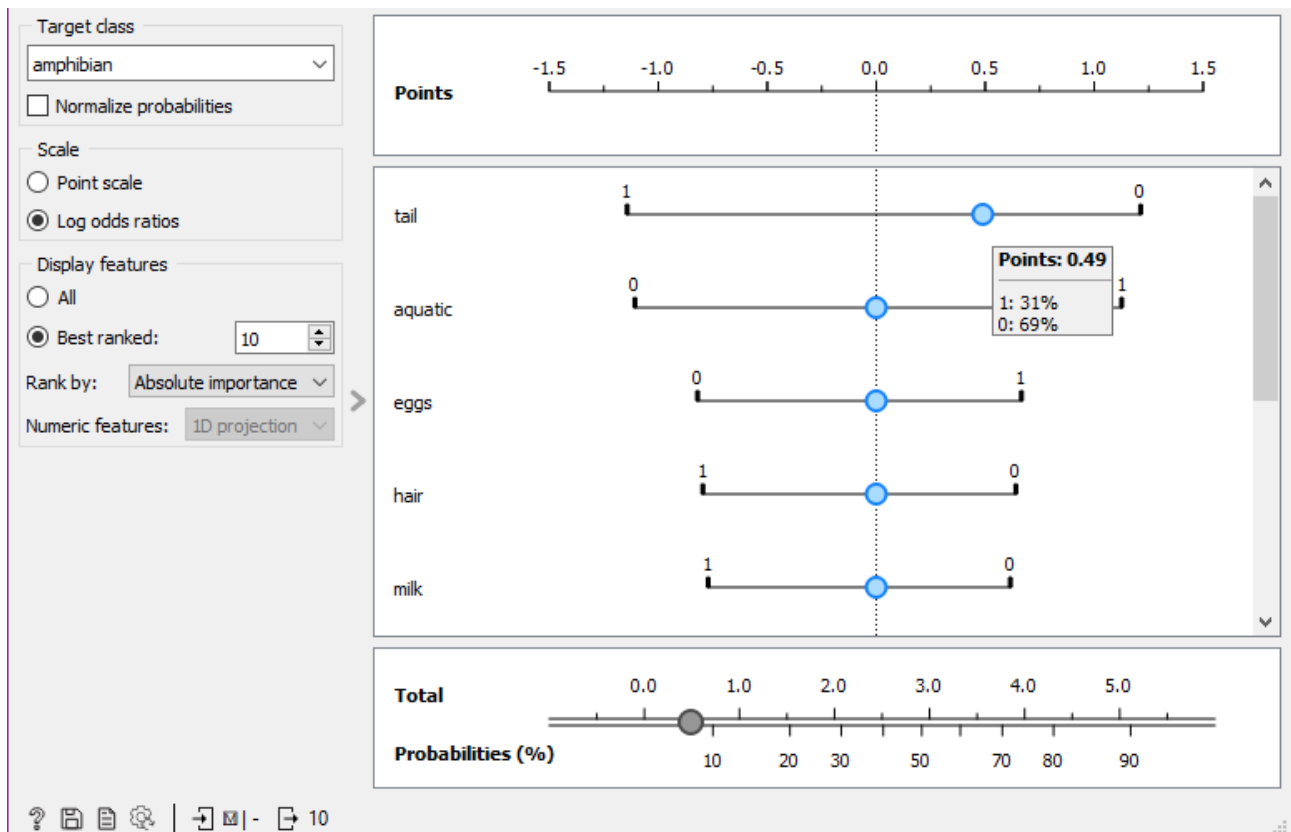

- A Nomogram is useful to view data from a Naïve Bayes' model. Drag and drop this widget onto the workspace. It can be found in the Visualise section.

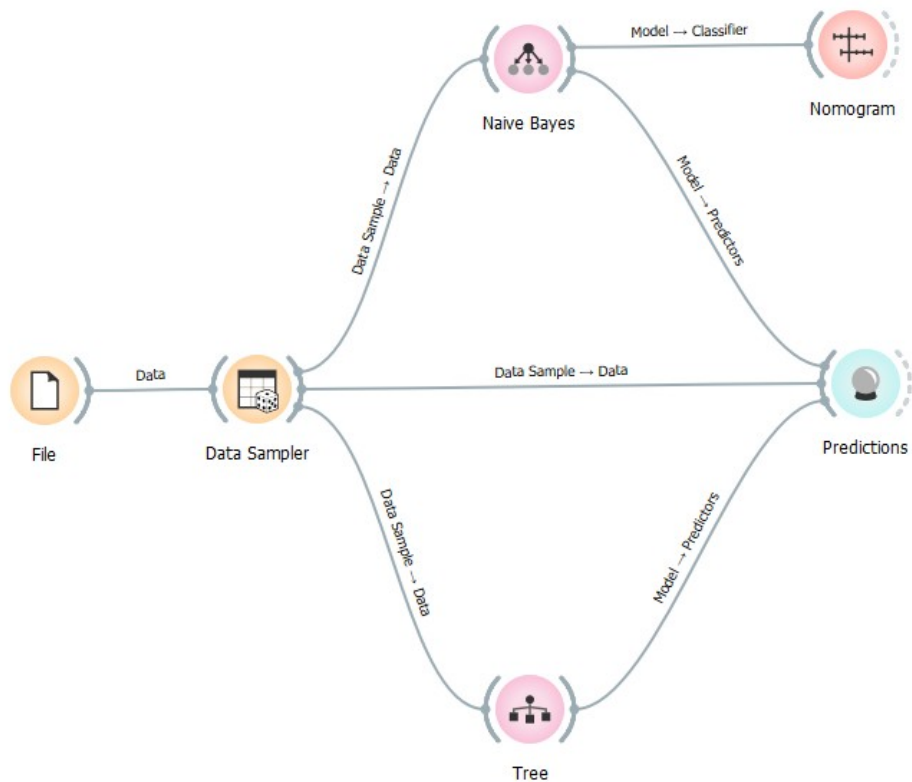

- You can move the points in the Nomogram to see the probabilities of a particular class. Here 1 indicates favourable probability while 0 indicates unfavourable probability.

- Connect the Naive Bayes' widget and Tree widget to the Predictions widget to perform predictions.

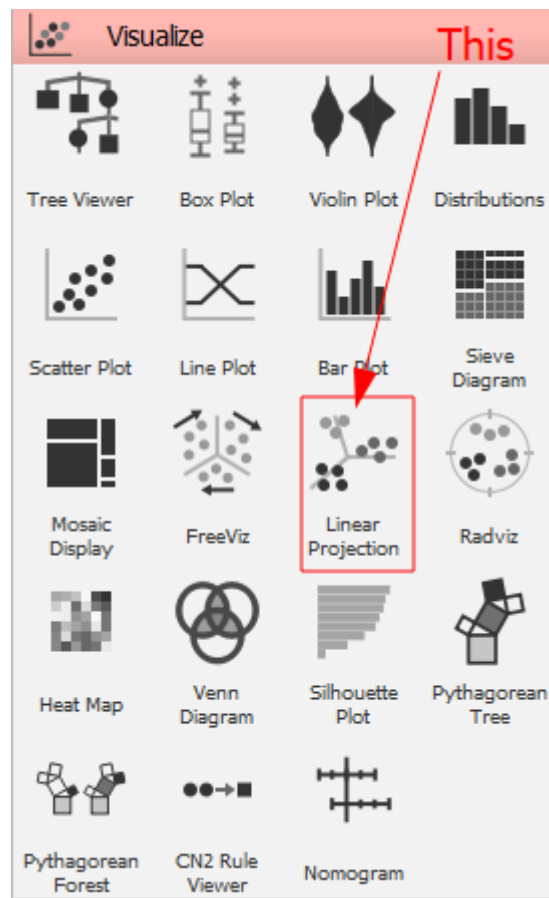

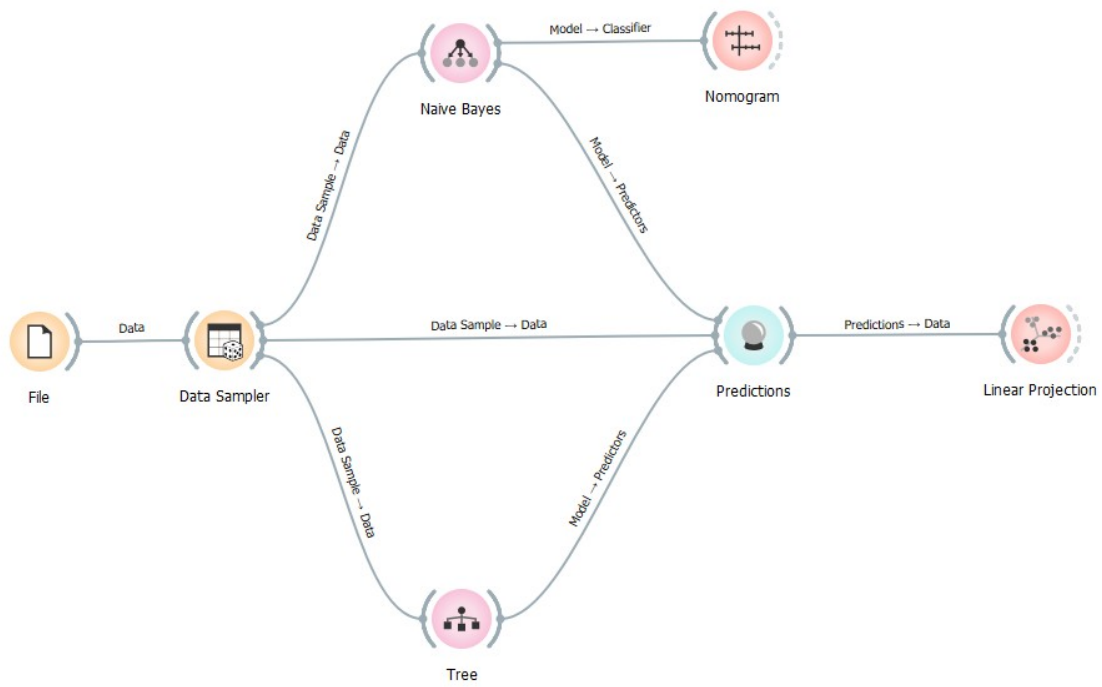

➤ Double click the Predictions widget to see the predictions.

Model	AUC	CA	F1	Precision	Recall
Naive Bayes	1.000	0.944	0.948	0.967	0.944
Tree	0.999	0.986	0.986	0.988	0.986

type	name	hair	feathers	eggs	milk
mammal	squirrel	1	0	0	1
mammal	oryx	1	0	0	1
mammal	porpoise	0	0	0	1
mammal	puma	1	0	0	1
mammal	lion	1	0	0	1
mammal	honeybee	1	0	1	0
mammal	elephant	1	0	0	1
mammal	leopard	1	0	0	1
mammal	cheetah	1	0	0	1
mammal	aardvark	1	0	0	1
fish	dogfish	0	0	1	0
insect	gnat	0	0	1	0
insect	wasp	1	0	1	0
bird	gull	0	1	1	0
invertebrate	seawasp	0	0	1	0
mammal	boar	1	0	0	1
mammal	vampire	1	0	0	1
bird	skimmer	0	1	1	0
fish	chub	0	0	1	0
mammal	goat	1	0	0	1
reptile	seasnake	0	0	0	0
amphibian	toad	0	0	1	0
amphibian	frog	0	0	1	0
insect	fishbird	0	0	1	0

- We will use the Linear Projection widget to visualize the data. Drag and drop this widget from the Visualise section.

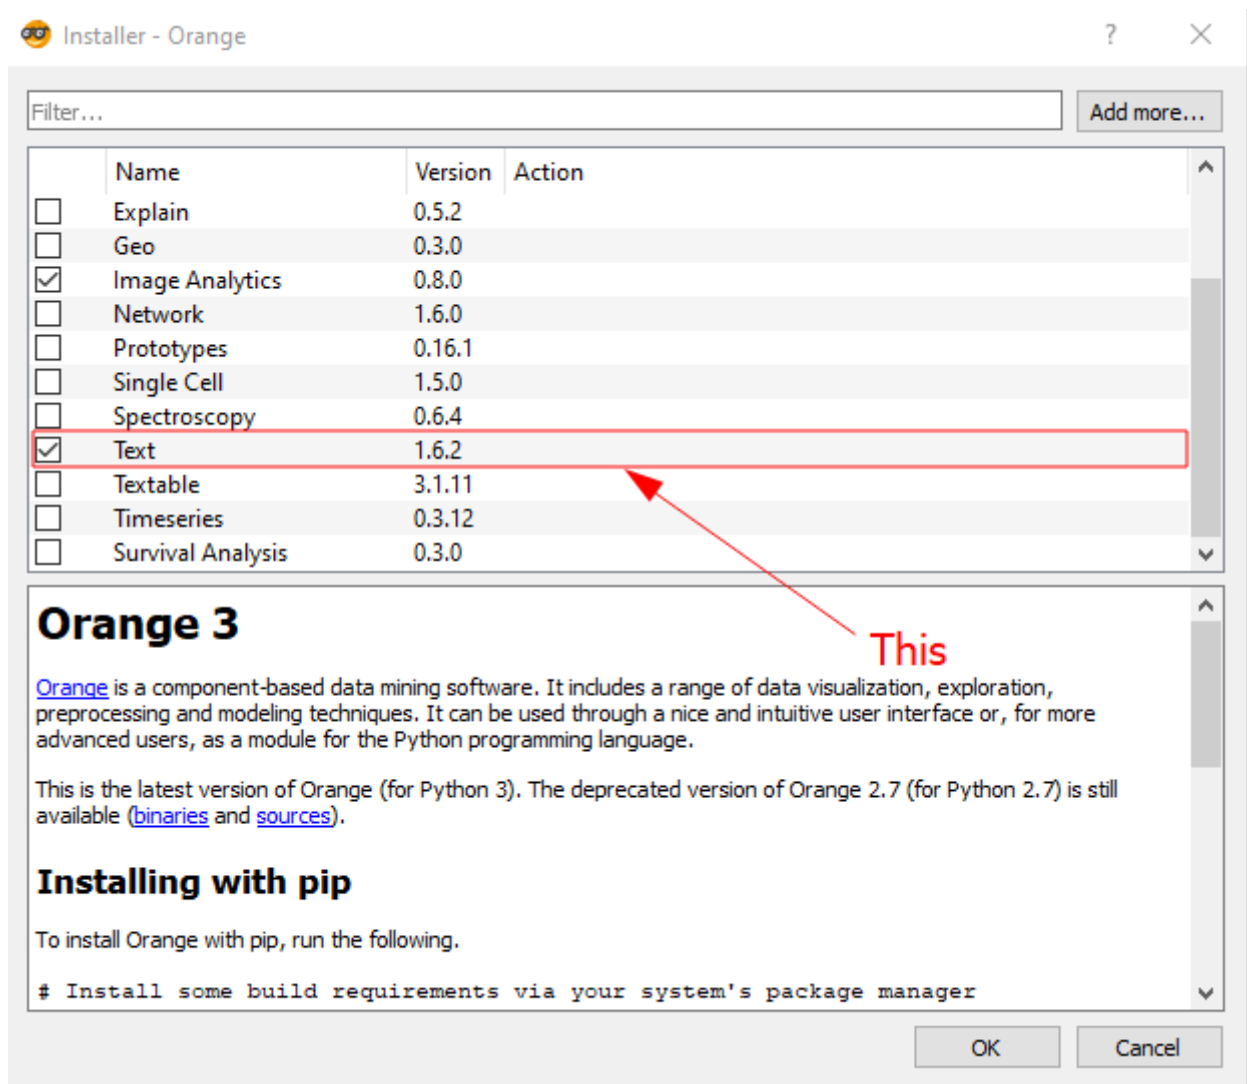

Practical 2

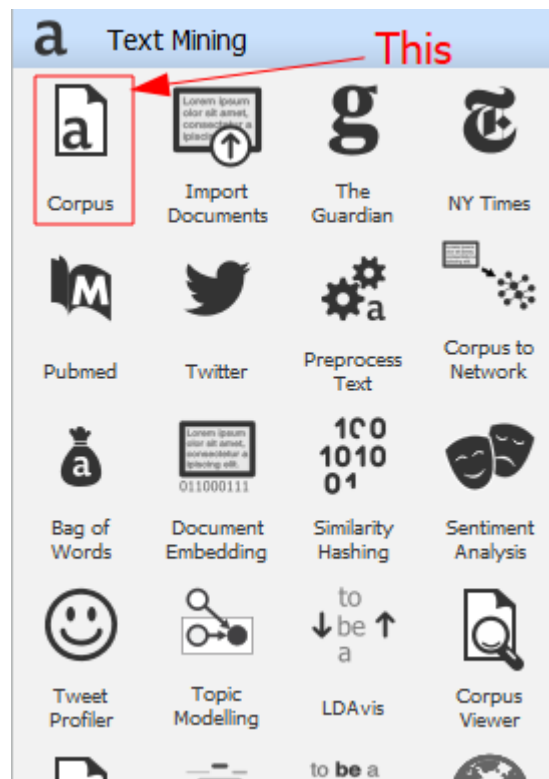

Aim: Text classification using Orange to determine whether the story has magic or is related to animals

Procedure:

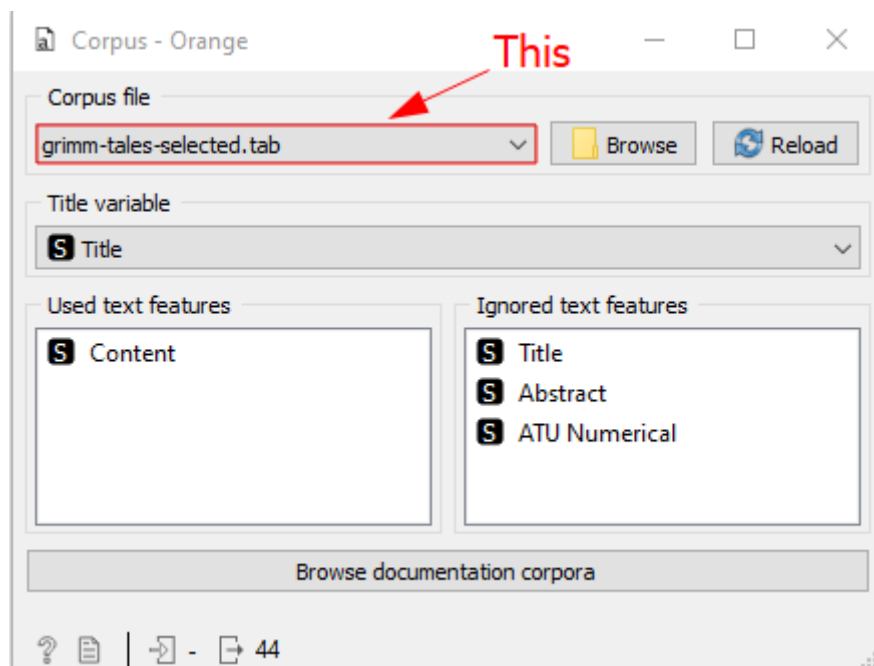

- Before starting, we need to install the **Text** add-on. Install it by navigating to **Options > Add ons...**. You will be prompted to restart Orange after the installation completes. If it is already installed, skip this step.

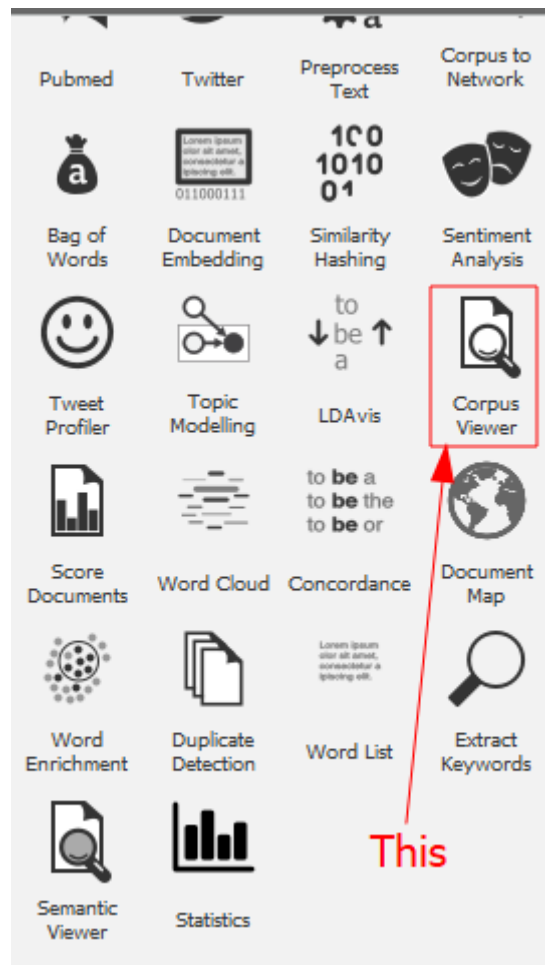

- Drag and drop a Corpus widget to the workspace. It can be found in the newly added Text Mining section.

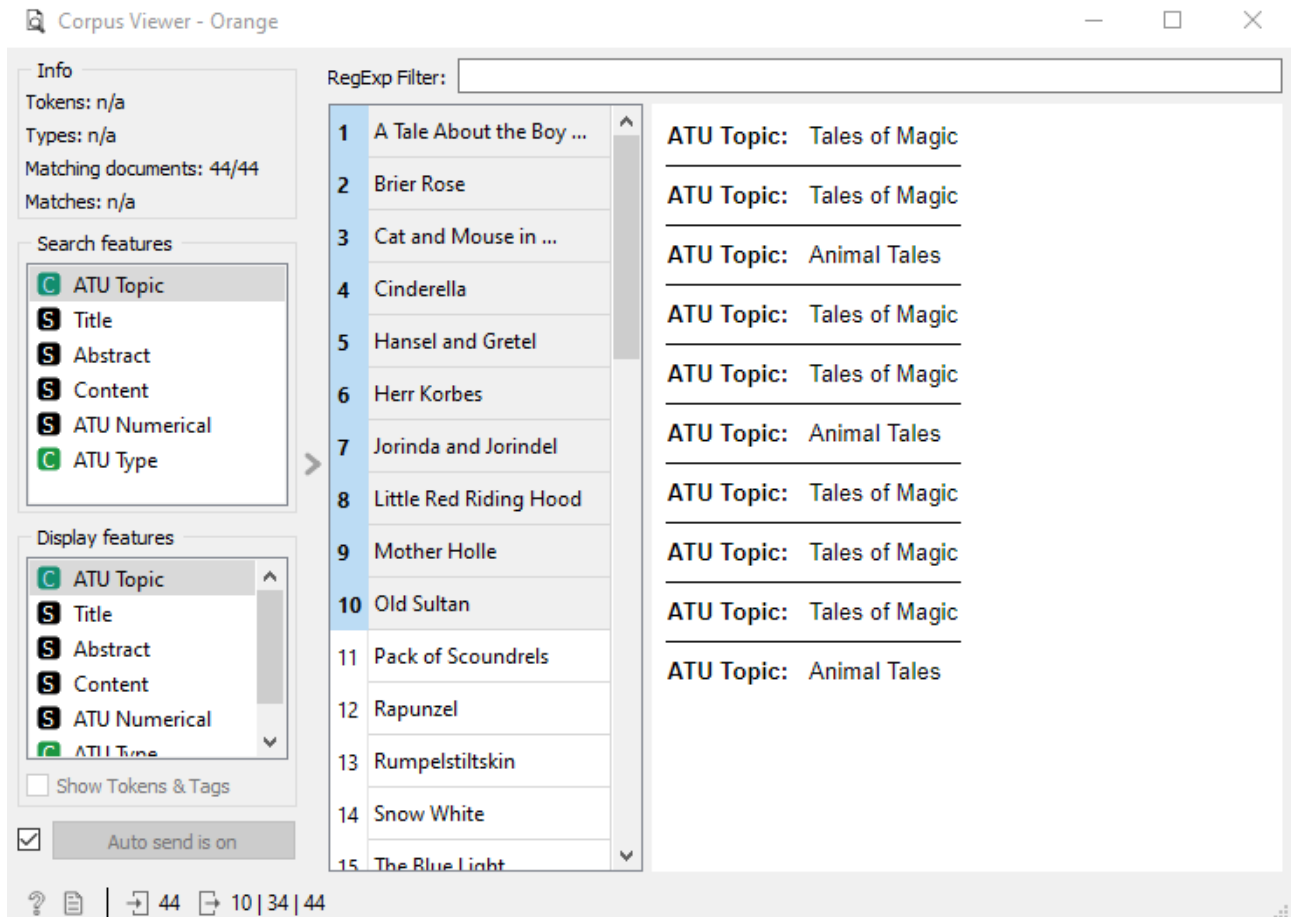

- Double click the Corpus widget and select the grimm-tales-selected.tab corpus file.

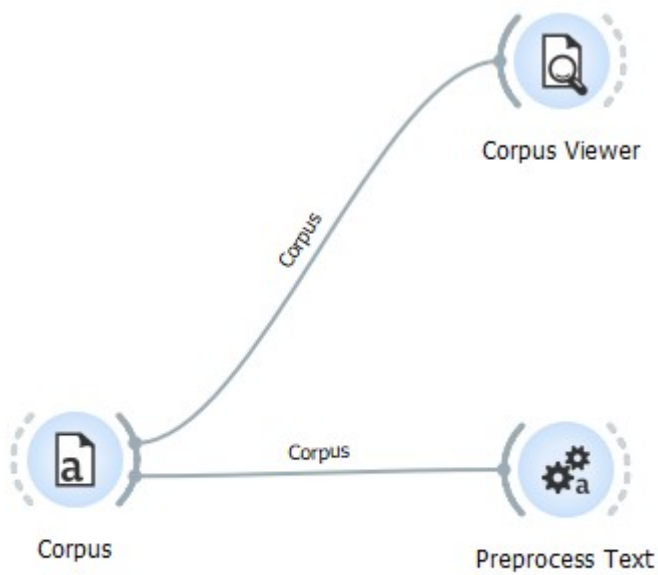

- Drag and drop a Corpus Viewer widget and connect it to the Corpus widget. The Corpus Viewer widget can be found in the Text Mining section.

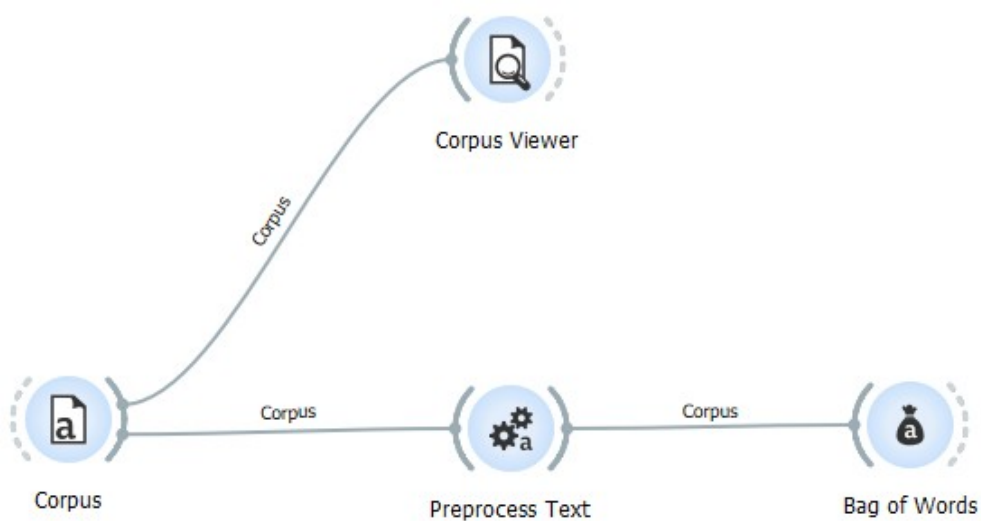

- Double click the Corpus Viewer widget to visualize the corpus in a tabular format. Select the first 10 entries to use as training set.

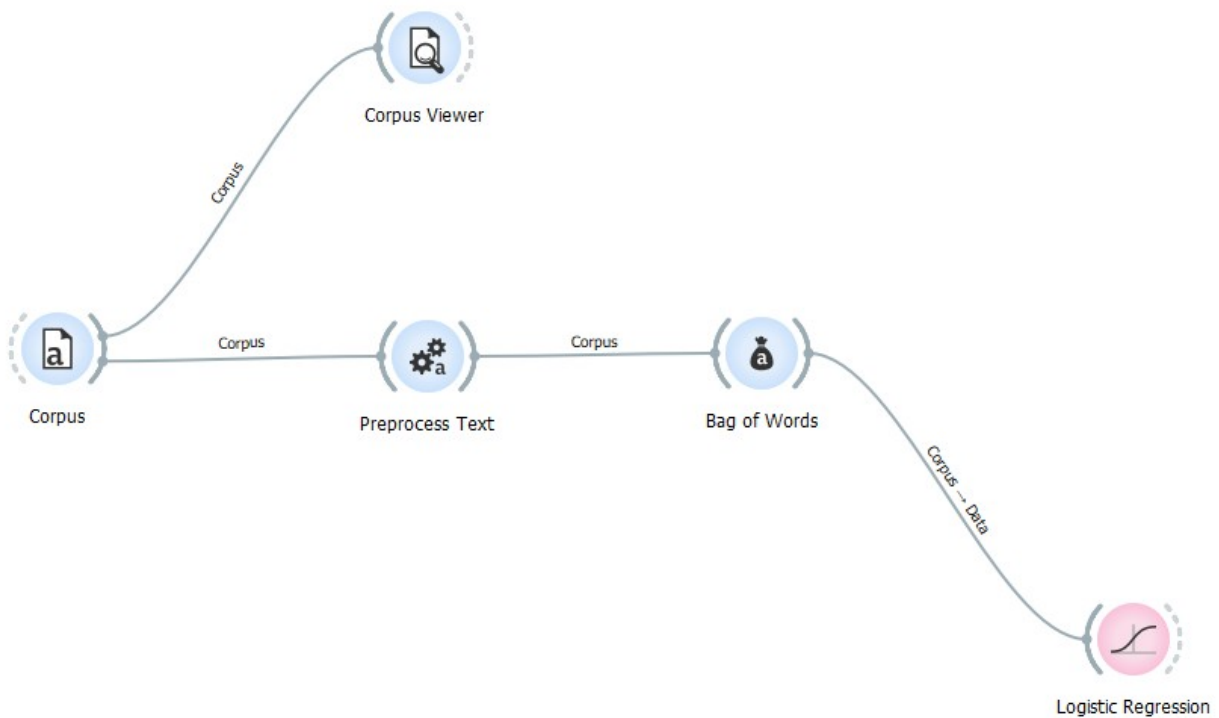

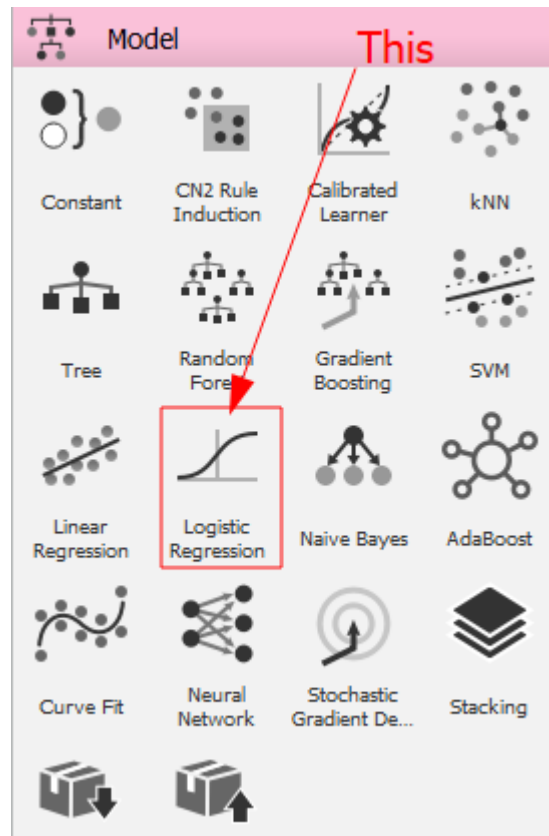

- Add a Preprocess Text widget to the workspace. This widget can also be found in the Text Mining section.

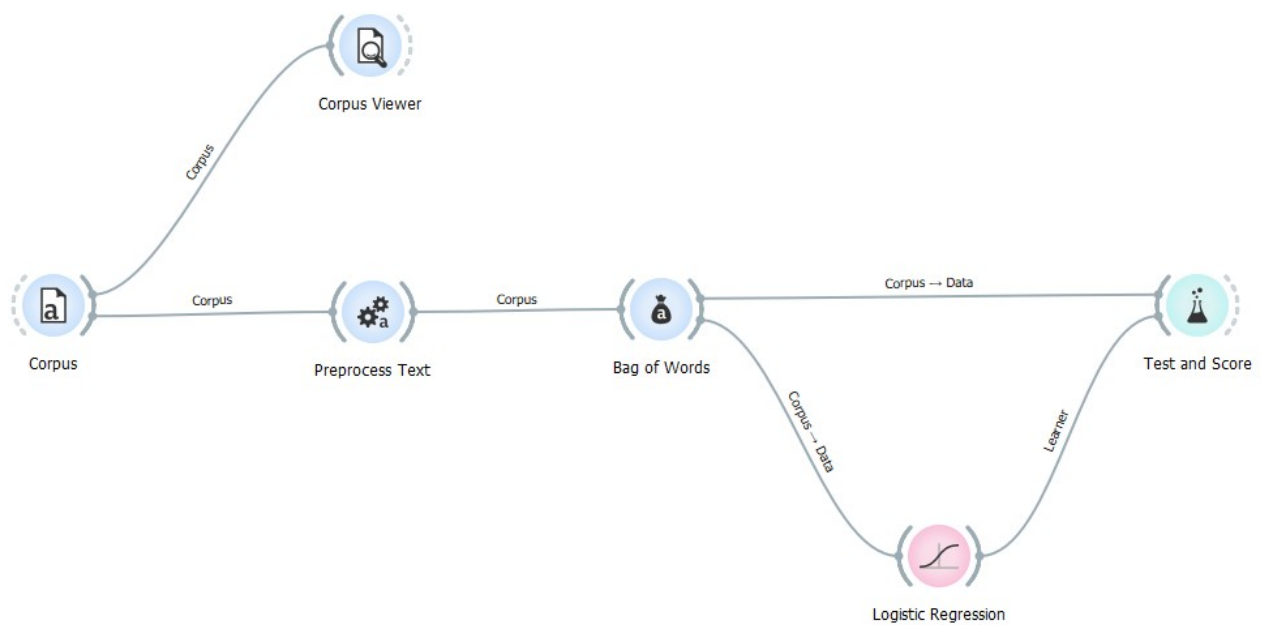

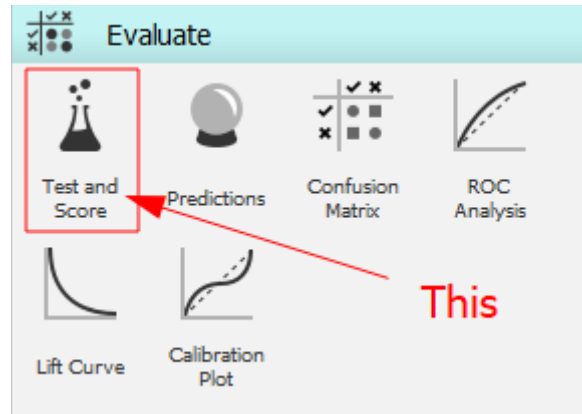

- Add a Bag Of Words widget to the workspace and connect it to the Preprocess Text widget. This widget is also found in the Text Mining section.

- We will use **Logistic Regression** to model our data. Drag and drop this widget from the **Model** section onto the workspace.

- We will use the Test and Score widget to check our model. Drag and drop this widget from the Evaluate section onto the workspace and connect it to the Logistic Regression model and Bag of Words widget.

- Double-click the Test and Score widget after it finishes processing. It will provide you with data such as the accuracy of the model etc.

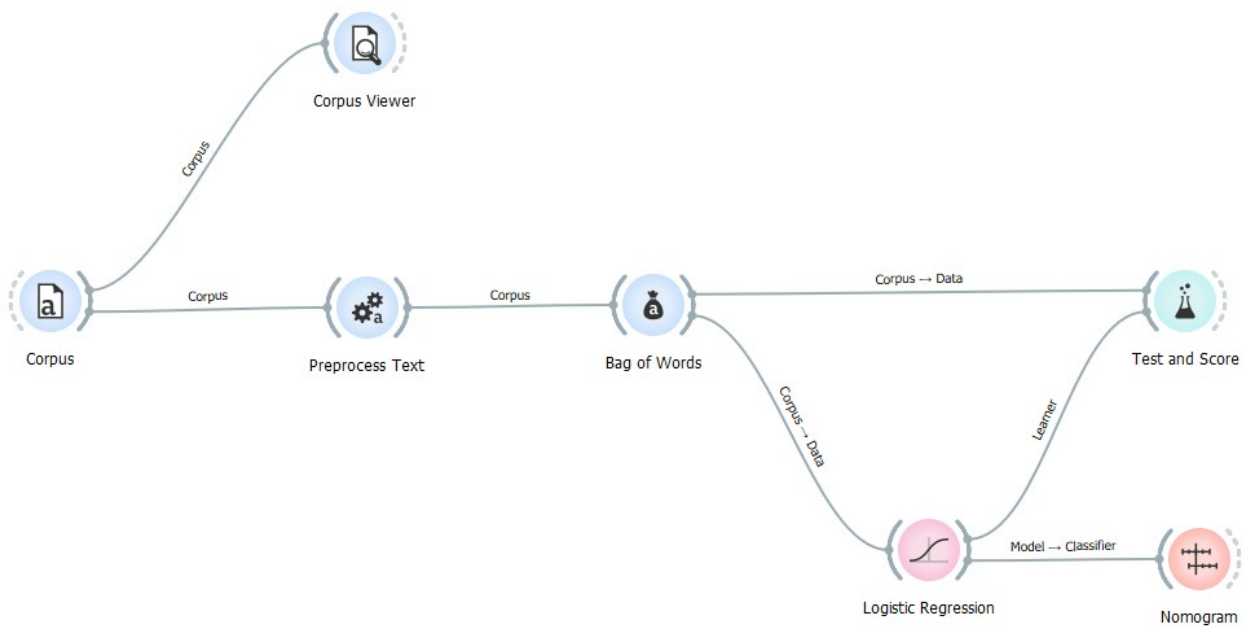

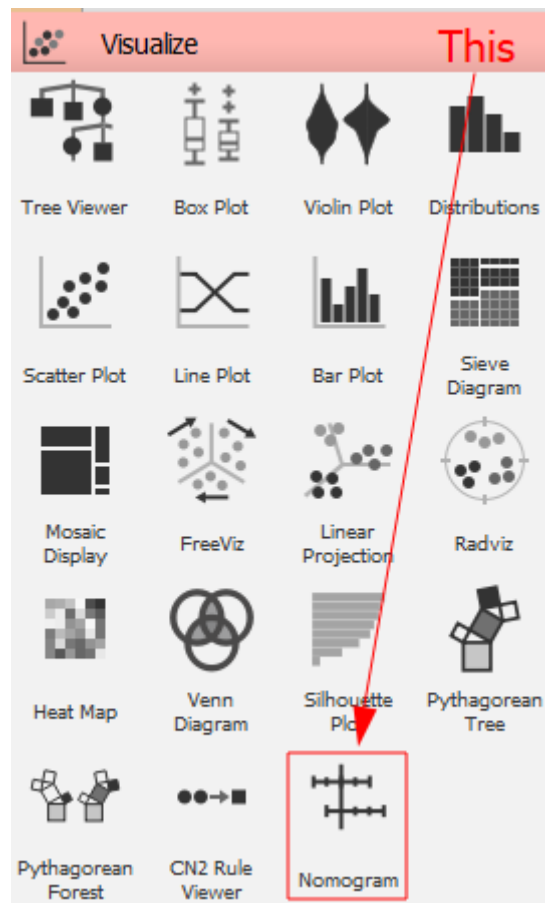

The screenshot displays the Orange3 software interface. On the left, the 'Sampling' section is active, showing 'Cross validation' selected with 10 folds and stratified sampling. The 'Target Class' is set to '(Average over classes)'. The 'Model Comparison' section shows 'Area under ROC curve' selected with a negligible difference of 0.1. On the right, the 'Evaluation Results' table shows the performance of the Logistic Regression model. Below it, the 'Model Comparison by AUC' table shows a comparison between two Logistic Regression models. A status bar at the bottom indicates the workspace size as 44 | 1x44.

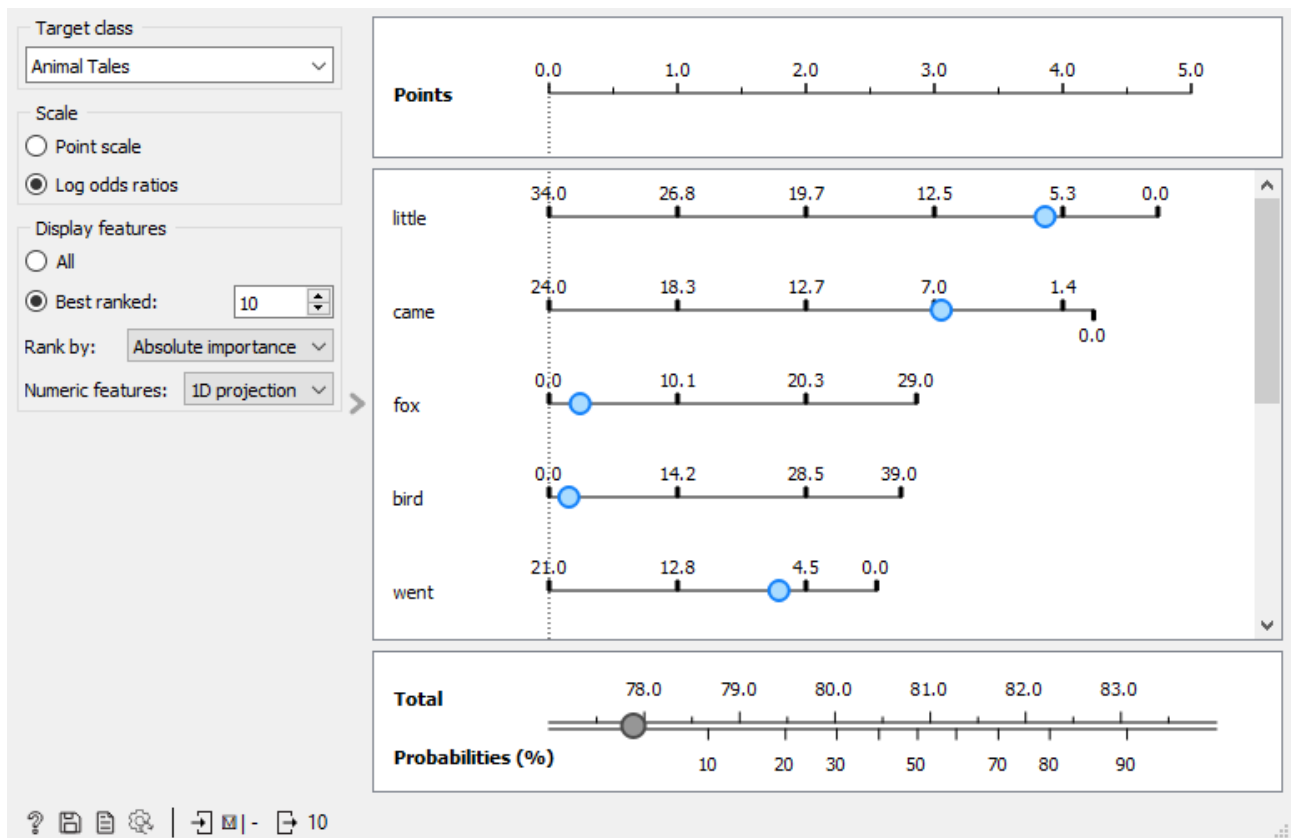

Model	AUC	CA	F1	Precision	Recall
Logistic Regression	0.968	0.909	0.910	0.926	0.909

Model	Logistic ...
Logistic Regression	

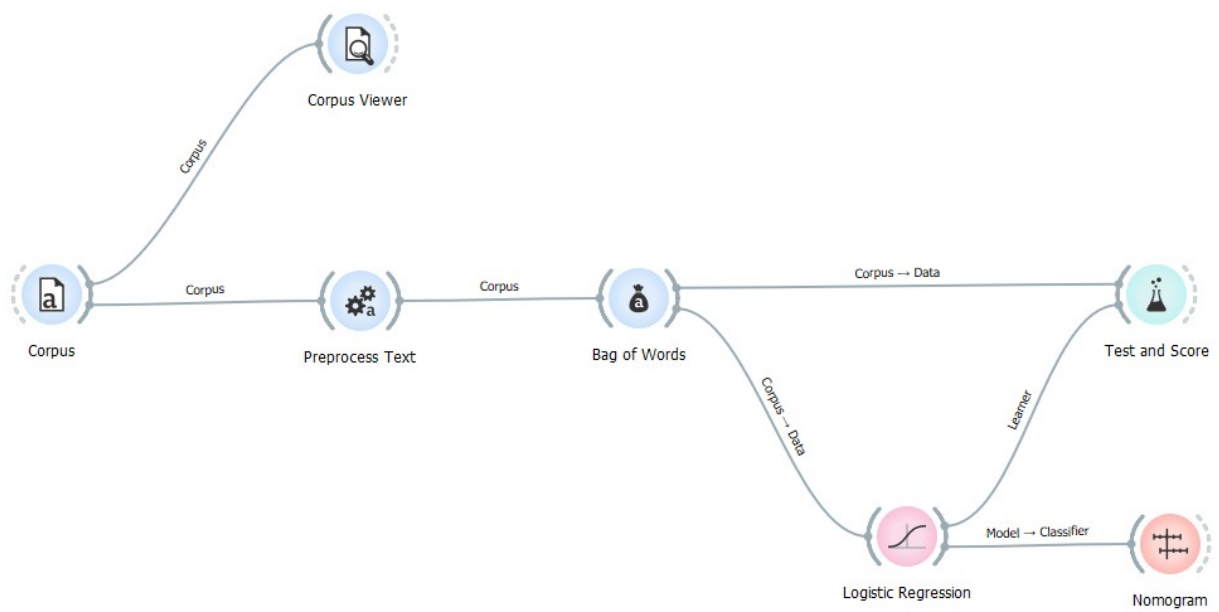

Table shows probabilities that the score for the model in the row is higher than that of the model in the column. Small numbers show the probability that the difference is negligible.

- We will use a Nomogram to visualise our model. Drag and drop it from the Visualise section onto the workspace and connect it to the Linear Regression model.

- To see whether the model works as intended, we create a new Corpus widget and set the file to `andersen.tab`.

Practical 3

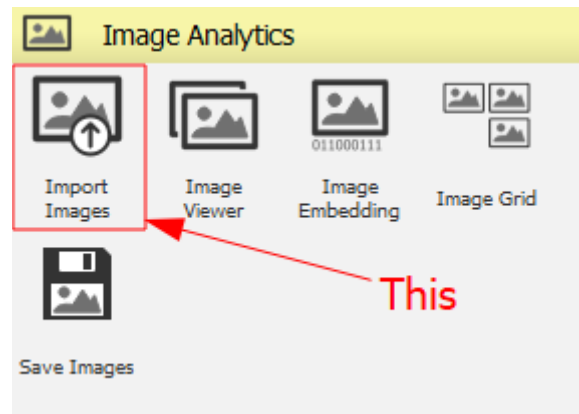

Aim: Image classification using orange.

Procedure:

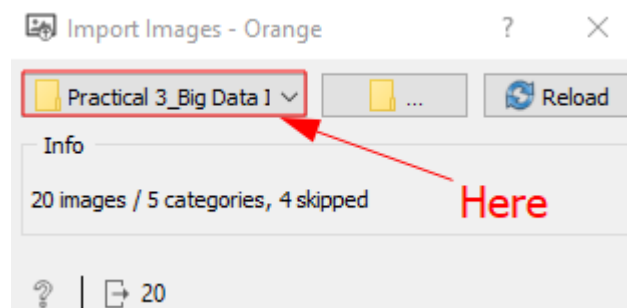

- Before starting, we need to install the **ImageProcessing** add-on. Install it by navigating to **Options > Add ons...**. You will be prompted to restart Orange after the installation completes. If it is already installed, skip this step.

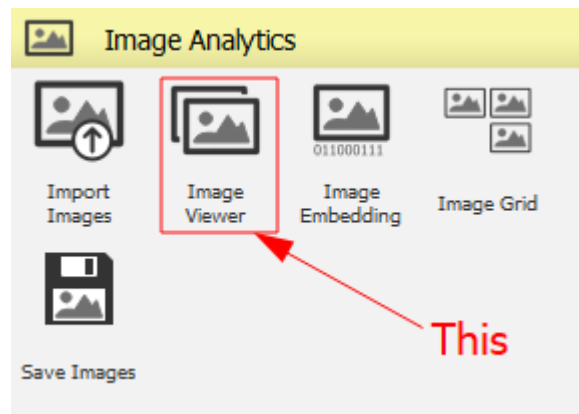

- Add a Import Images widget from the newly added Image Analytics section to the workspace.

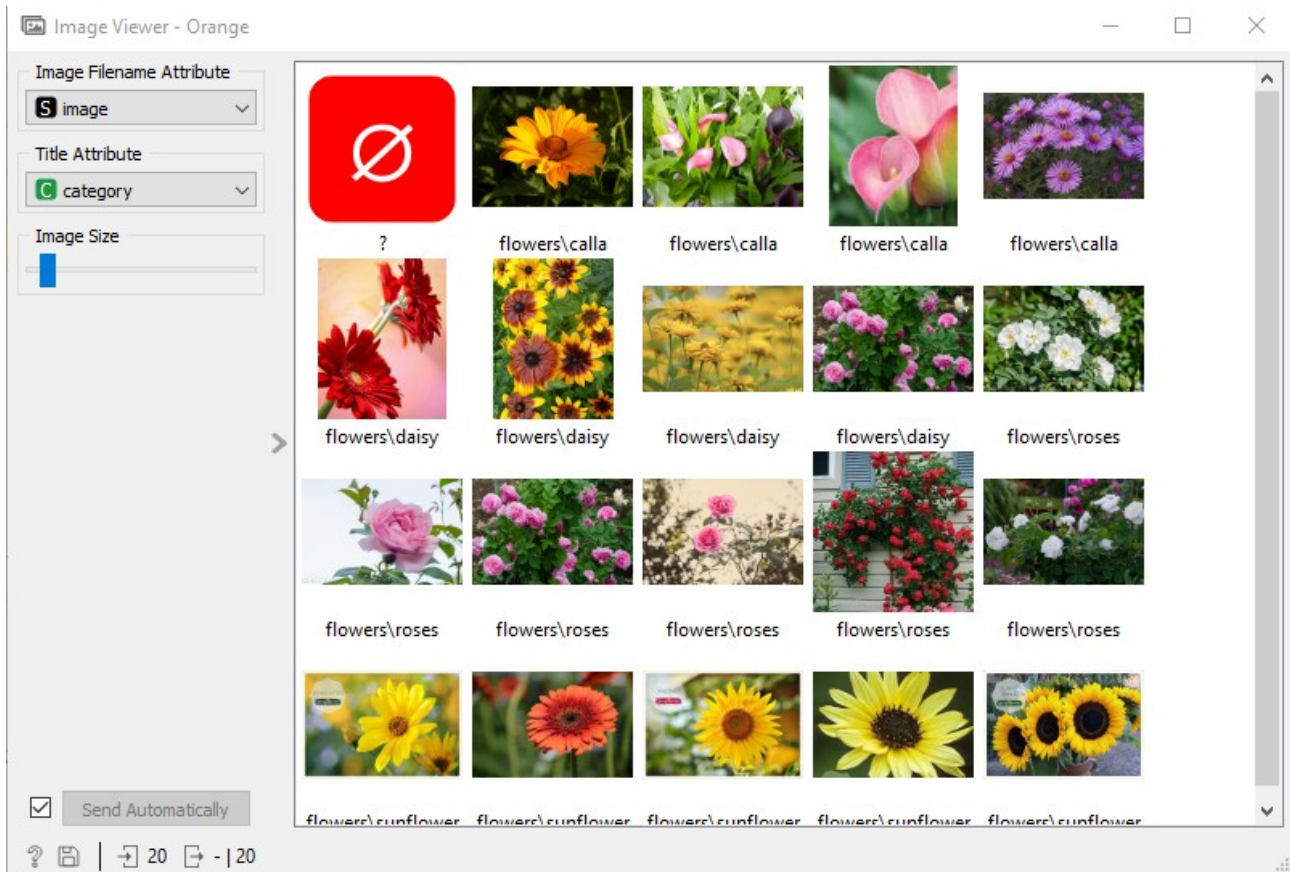

- Load the directory containing the images in the newly added Import Images widget by double clicking the widget.

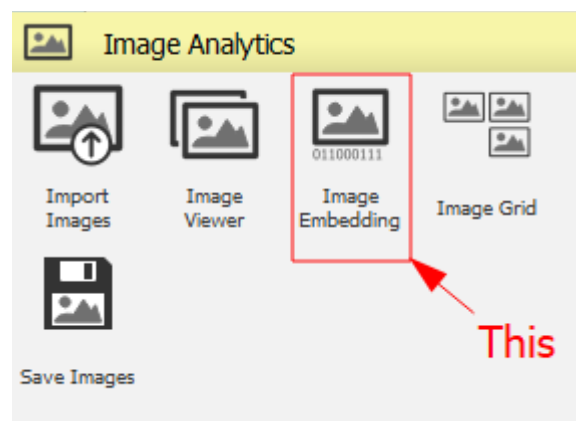

- We can view these images using the Image Viewer widget found in the Image Analytics section. Drag and drop this widget onto the workspace and connect it to the Import Images widget.

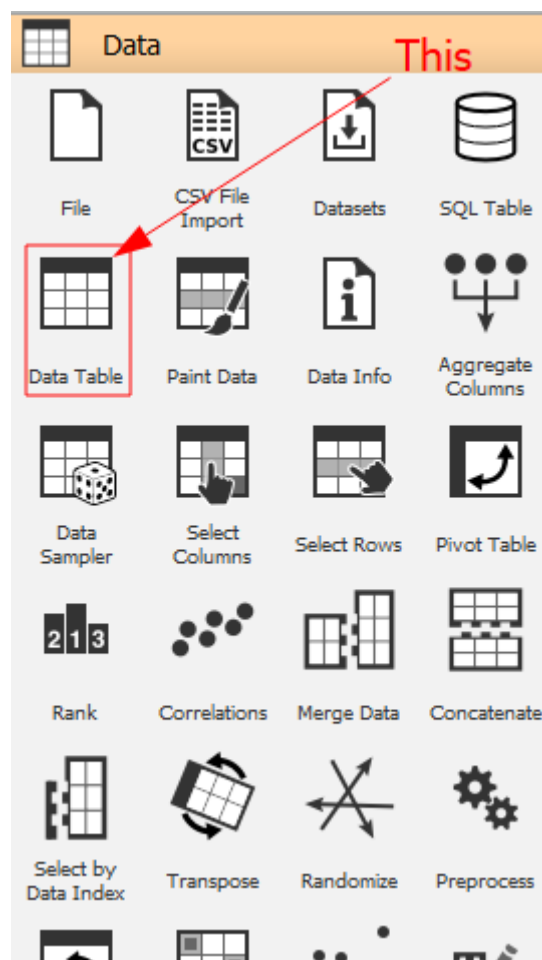

- As our models can only process numbers, we need to convert the images into numerical data. This is where Image Embedding comes into play. Drag and drop a Image Embedding widget from the Image Analytics section onto the workspace and connect it to the Import Images widget.

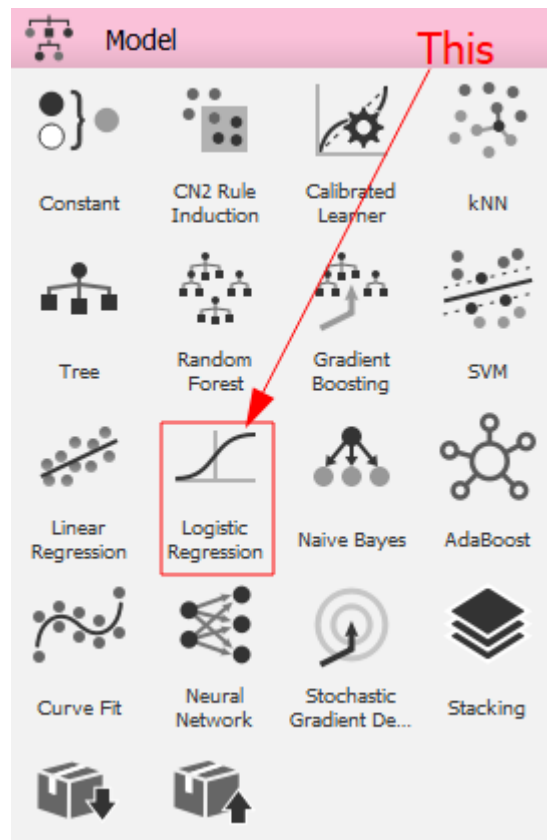

- We use a Data Table to visualise the tabular data generated by the Image Embedding widget. Drag and drop a Data Table widget from the Data section onto the workspace and connect it to the Image Embedding widget.

- We will use Logistic Regression as our model. Drag and drop a Logistic Regression widget from the Model section onto the workspace.

- Drag and drop a Test and Score widget from the Evaluate section onto the workspace. This widget will allow us to verify our model. Connect this widget to the Image Embedding and Logistic Regression widgets.

? | 150

Note: A red arrow points from the word "Here" to the "iris.tab" text box in the Source section.

- Drag and drop the Distances widget from the Unsupervised section onto the workspace and connect it to the File widget.

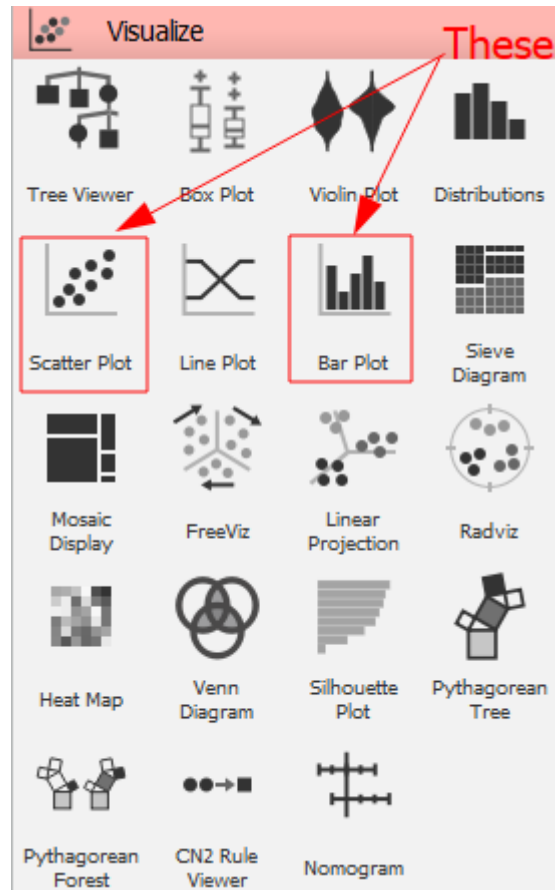

- Drag and drop a Hierarchical Clustering widget from the Unsupervised section to the workspace and connect it to the Distances widget.

- Double click the Hierarchical Clustering widget to view the dendrogram. Select any sub-cluster as per convenience.

- Choose any visualization method of your choice. This example assumes a Bar Plot for the sub-cluster and a Scatter Plot for the source dataset. You can find both of these widgets in the Visualise section. Connect the Bar Plot to the Hierarchical Clustering widget and Scatter Plot to the File widget.

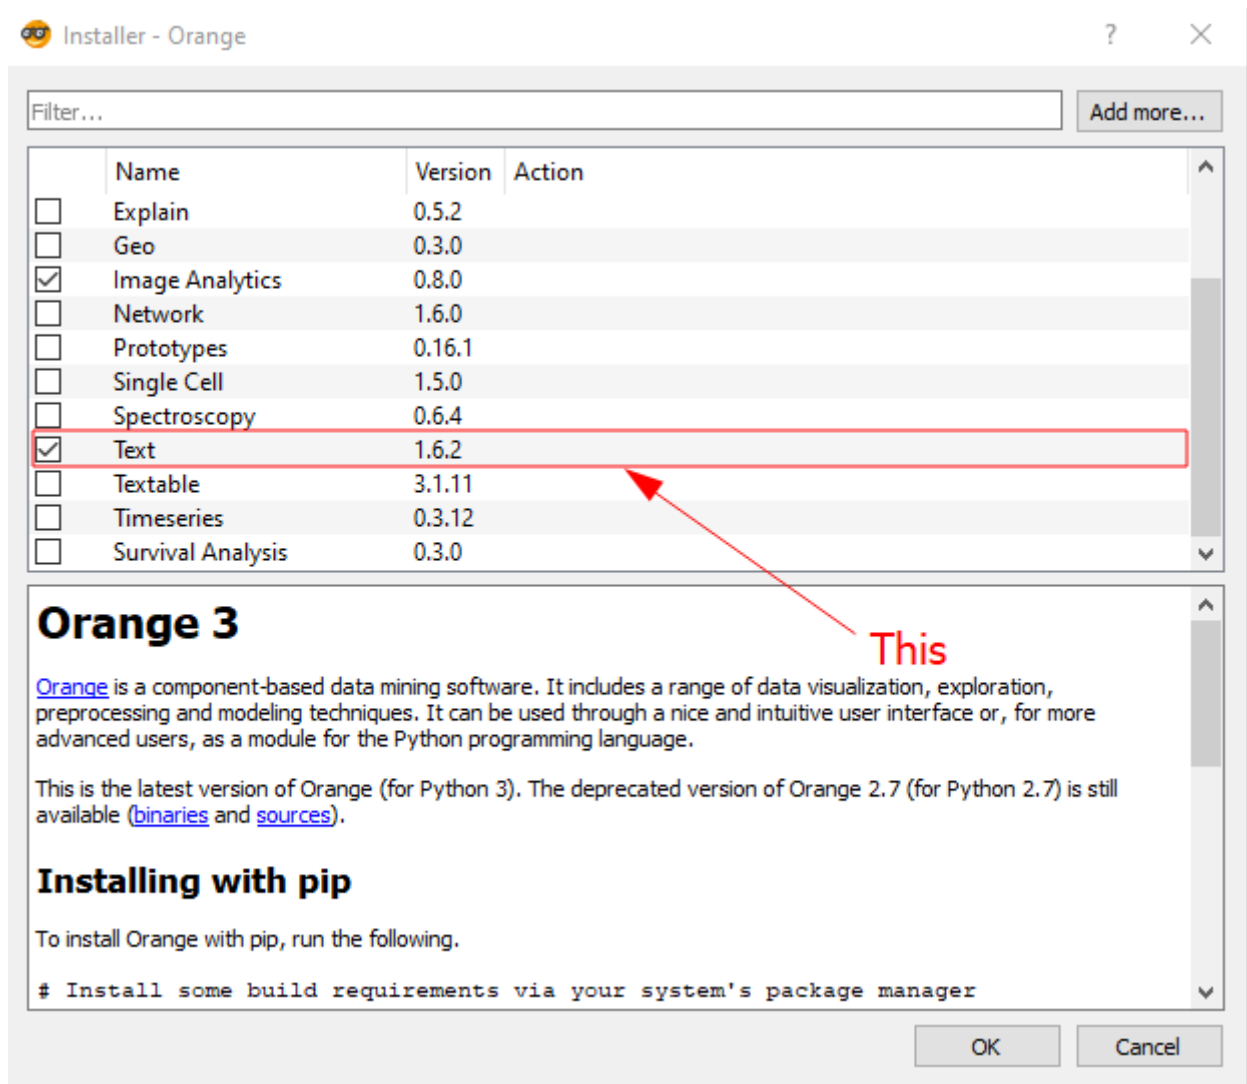

Practical 5

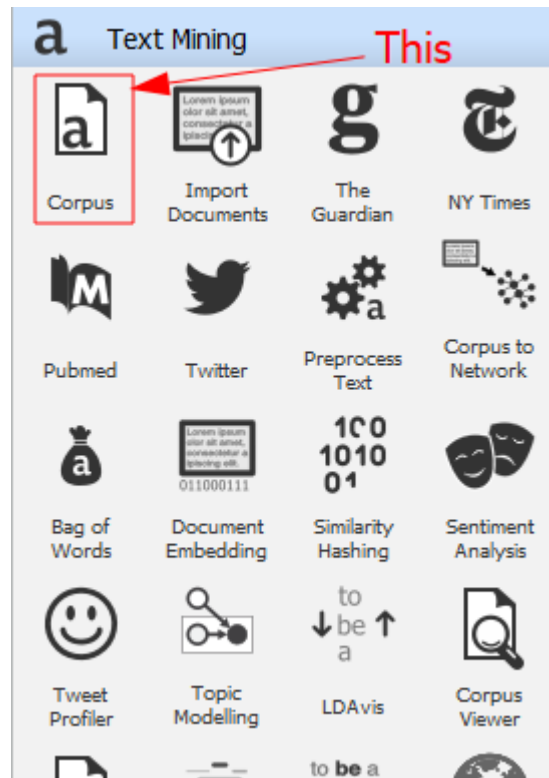

Aim: Hierarchical clustering using orange.

Procedure:

- Before starting, we need to install the **Text** add-on. Install it by navigating to **Options > Add ons...**. You will be prompted to restart Orange after the installation completes. If it is already installed, skip this step.

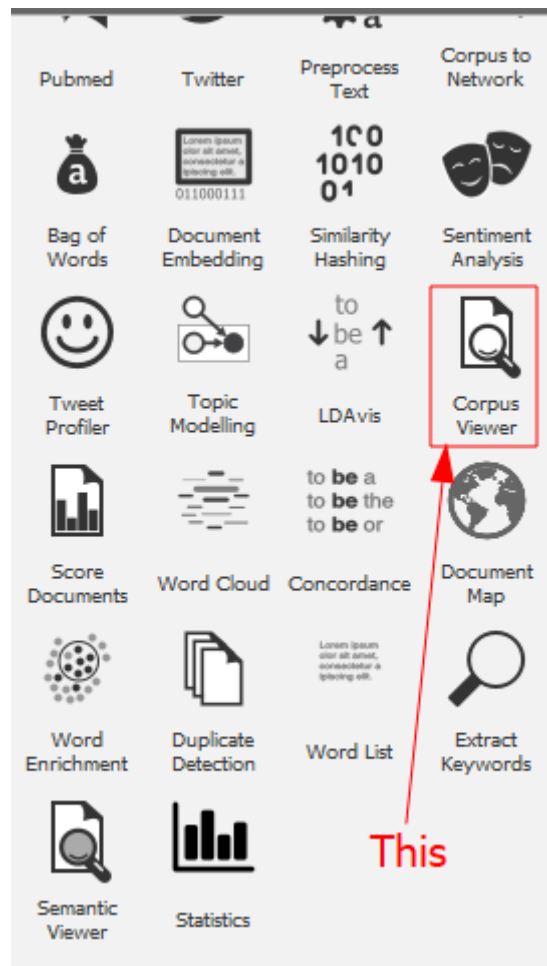

- Drag and drop a Corpus widget to the workspace. It can be found in the newly added Text Mining section.

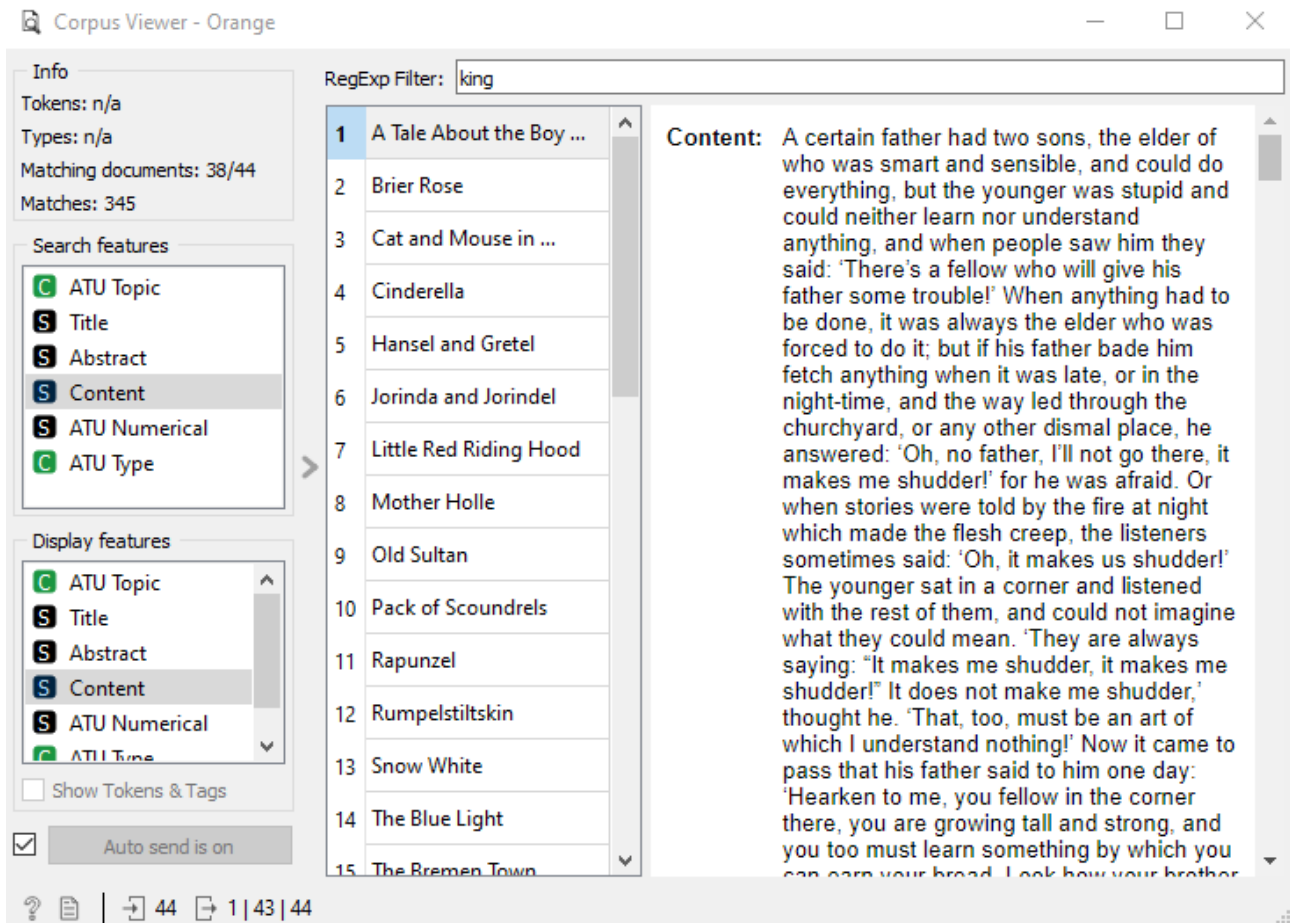

- Double click the Corpus widget and select the `grimm-tales-selected.tab` corpus file.

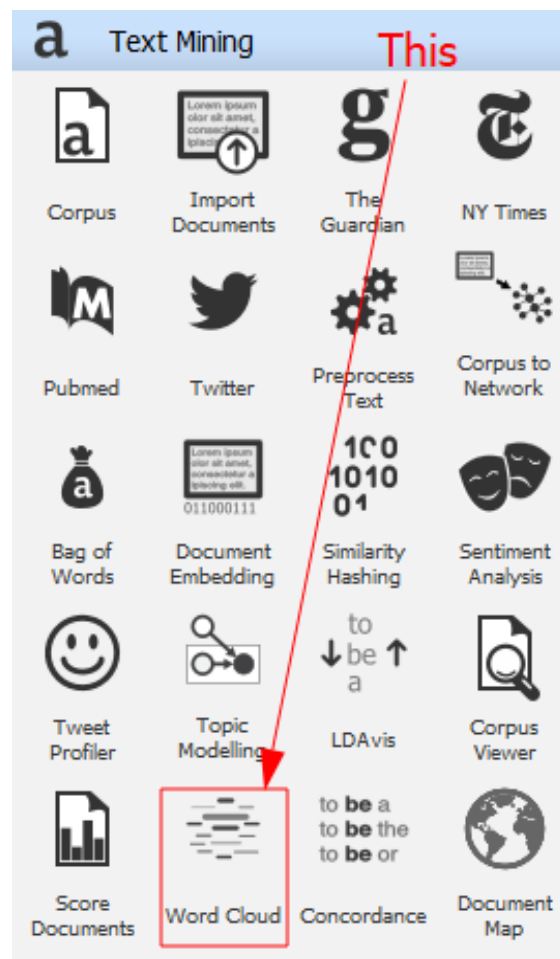

- Drag and drop a Corpus Viewer widget and connect it to the Corpus widget. The Corpus Viewer widget can be found in the Text Mining section.

- Double-clicking the Corpus Viewer allows us to peek through the corpus and also allows us to filter text.

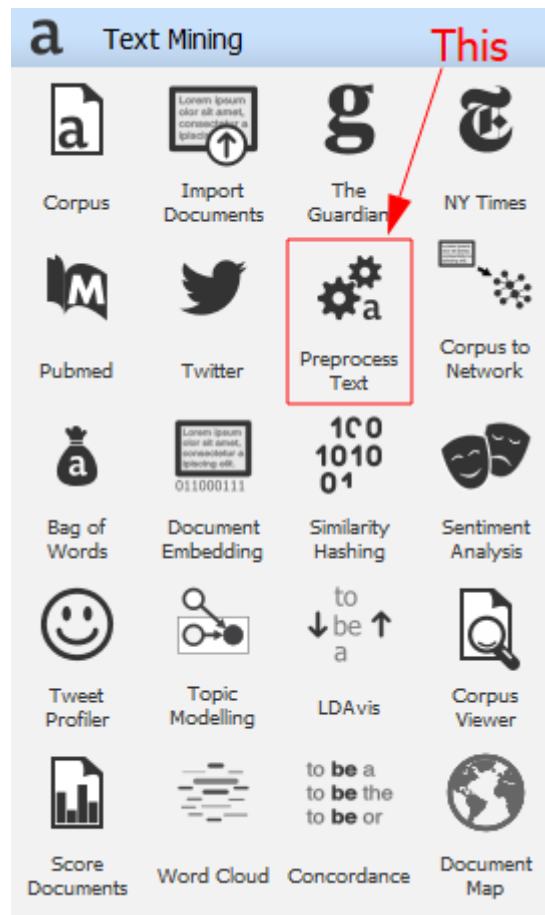

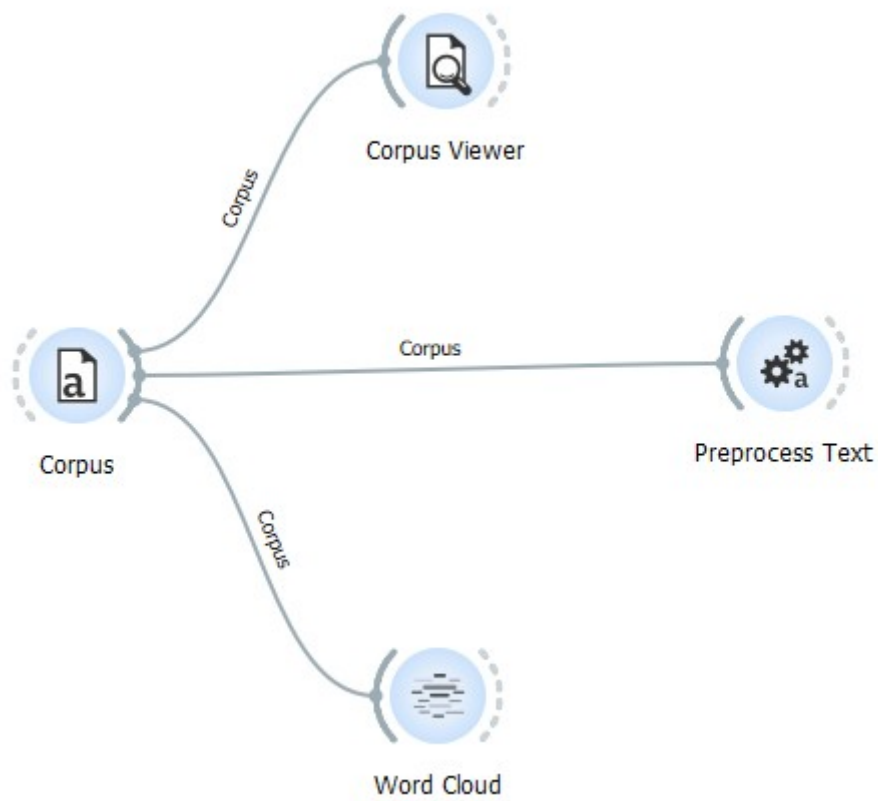

- Another method of visualizing data is through Word Clouds. Drag and drop a Word Cloud widget from the Text Mining section and connect it to the Corpus widget.

- We see that a lot of punctuation marks and uninformative words have made their way into the Word Cloud. In order to eliminate this, we have to use the Preprocess Text widget. Drag and drop a Preprocess Text widget from the Text Mining section onto the workspace and connect it to the Corpus widget.

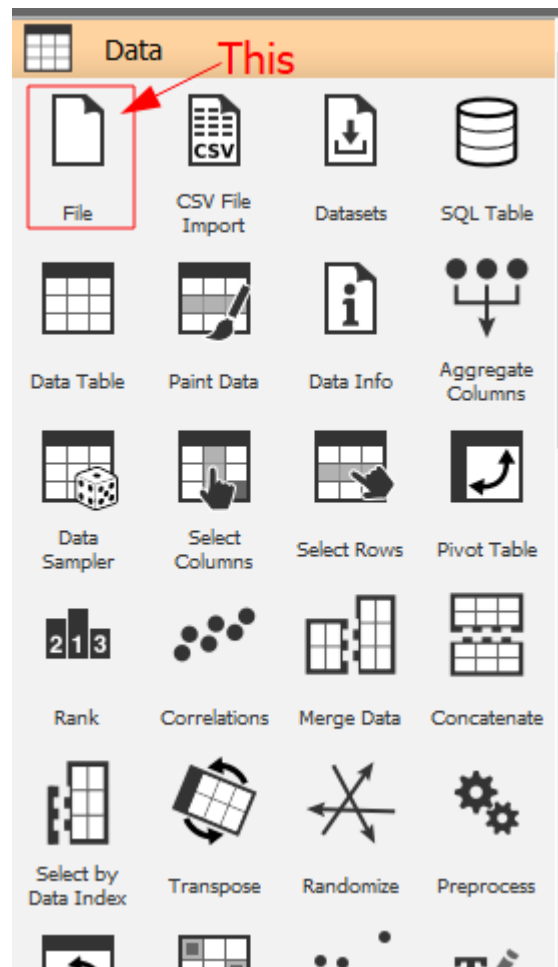

- We now add another Word Cloud widget to see our updated cloud.

Practical 6

Aim: Predictions using orange.

Procedure:

- Drag and drop a new File widget from the Data section to the workspace.

File

- Double click the File widget, select the **URL** radiobutton and enter the following [URL](https://raw.githubusercontent.com/ajdapretnar/datasets/master/data/fruits-and-vegetables-train.tab).
